*Structure and expression of the gene encoding ribosomal protein S1 from the cyanobacterium Synechococcus sp. strain PCC 6301: striking sequence similarity to the chloroplast ribosomal protein CS1.*;

Mol. Gen. Genet. 246:142-147(1995).

-I- FUNCTION: BINDS MRNA.

-I- SIMILARITY: BELONGS TO THE S1P FAMILY OF RIBOSOMAL PROTEINS.

-I- SIMILARITY: CONTAINS 3 S1 MOTIF DOMAINS.

Transferrin rece
TFR2.
lacks the transmembrane domain and is probably intracellular.

-I- ALTERNATIVE PRODUCTS: 3 isoforms; alpha (shown here), beta and gamma; are produced by alternative splicing.

-I- TISSUE SPECIFICITY: Predominantly expressed in liver. While the alpha form is also expressed in spleen, lung, muscle, prostate and peripheral blood mononuclear cells, the beta form is expressed in all tissues tested, albeit weakly.

-I- DISEASE: Defects in TFR2 are a cause of hereditary hemochromatosis in tron overload and has a phenotype indistinguishable from that of hereditary hemochromatosis (HH). HH is characterized by abnormal intestinal iron absorption and progressive increase of

Since the disease complications can be effectively prevented by regular phlebotomies, early diagnosis is most important to provide a normal life expectancy to the affective important to provide a normal life expectancy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a murine pituitary-derived ligand polypeptide Which is a ligand for the G-protein coupled orphan receptor designated GC GPRIO (human) or UHR-1 (rat). Cells transformed with a vector containing the ligand polypeptide encoding DNA are used to produce a recombinant CC function of the pituitary, central nervous system, pancreas and other CC tissues and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a CC sample and to raise antibodies. They may also be used therapeutically, CC e.g. to treat senile dementia; Alzhelmer's, Parkinson's or Huntington's CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC diseases; chizophrenia; disorders of growth hormone secretion; cancer; CC remmatoid arthritis, epilepsy and many others, also to improve post-coperative nutritional status and as vasopressor. Transgenic animals CC carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide-expressing genes, as models of CC disease, for drug screening and as source of cell lines. The ligand CC related sequences; in receptor-binding assays; for production of Ab and CC related sequences; in receptor-binding assays; for production of Ab and CC transgenic animals. Sequences AAM95174 to AAW95178 represent antigenic CC antibody.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This peptide contains the partial C-terminal sequence of the synthetic cliquand polypeptide 19p2-I31 which is capable of binding to a G protein-coupled receptor protein. This peptide is used as an antigen to CC protein-coupled receptor protein. This peptide is used as an antigen to CC propare rabbit anti-bovine 19p2-I31 antibodies which are used in binding CC assays. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific CC applications as a prophylactic or therapeutic agent for dementia, CC depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, CC hyper- and polyphagia, hyperlipidaemia, hypercholesterolaemia, conversional injury, transient brain ischaemia, diabetes, cancer, pancreatitis, CC renal disease, Turner's syndrome, neurosis, asthma, rheumatoid arthritis, CC consciousness, acute myocardial infarction, infertility, spinocerebellar conversion, bone fracture, trauma, atopic dermatitis, osteoporosid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

The agents for inhibiting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease, prolactionma, infertility, impotence, amenorrhea, galactorrhea, acromegaly, chiari-Frommel syndrome, Argonz-del Castilo syndrome, Forbes-Albright syndrome, I ymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choricoarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus, abnormal saccharometabolism, abnormal lipidmetabolism or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAW97229-31 represent a ligand polypeptide derived fragments used to produce antibodies. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a grotein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypocovarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Example 43; Page 123; 241pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19P2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. Sequences AAY49290-302 represent peptide fragments of the 19P2 ligand.
                                                                                                                                                                                                                                                                                                                                Homo

                      This sequence represents a peptide fragment from a novel human type CC ligand polypeptide corresponding to annion acid residues 34 to 53 of the Sequence represented in AAM31390 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function cc modulator. This ligand could have specific applications as a contraining this ligand may be used as a pituitary function cc modulator. This ligand could have specific applications as a comply lactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, cc trauma, growth hormone secretory disease, hyper-and polyphagia, cc hyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, hypercholesterolaemia, hyperglyceridaemia, cancer, pancreatitis, renal disease, cc Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, cacute myocardial infarction, infertility, spinocerebellar degeneration, collegalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    õ

                                                                                                                                                                                                                                                             hyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, hypercholesterolaemia, hyperglyceridaemia, disbetes, cancer, pancreatitis, renal disease, Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinocerebellar degeneration, bone fracture, trauma, atopic dermatitis, osteoporosis and/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ligand polypeptide corresponding to amino acid residues 33 to 52 of the sequence represented in AAW31333 and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          28-DEC-1995;

                             This sequence represents a peptide fragment of a novel bovine pituitary content of the corresponding to amino acid residues 34 to 53 of the compositions of the containing this ligand may be used as a pituitary function modulator. A containing this ligand may be used as a pituitary function modulator. Compositions of the containing this ligand may be used as a pituitary function modulator. Composition modulator or a pancreatic function modulator. Composition modulator or a pancreatic function modulator. Composition modulator or a pancreatic function modulator. Composition modulator or a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, composition as a prophylactic or composition of consciousness, anxiety syndrome, schizophrenia, trauma, composition polyphagia, hyperflyceridaemia, hyperflyc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              18-SEP-1996;

                                                                                                                                                               The present sequence represents a bovine pituitary-derived ligand CC fragment. It is used in the course of the invention. The specification CC describes an agent for modulating prolactin secretion which comprises a CC ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR) CC protein. The agents for promoting prolactin secretion can be used for treating or preventing hypometabolism. They can by used for promoting syndrome, euthyroid or hypometabolism. They can by used for promoting CC lactation in a domestic mammal and as an aphrodisiac. The agents for conhibiting prolactin secretion can be used for treating or preventing CC pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease, prolactinoma, infertility, impotence, amenorrhea, galactorrhea, CC prohes-Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used for treating or preventing CC modulating placental function can be used for treating or preventing CC choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus, abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia.

                                                                                                                                 The present sequence represents a rat type ligand fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a construction. The agents of a salt, for a G protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypocovarianism. They can by used for promoting controlling the prolactin secretion can be used for treating or preventing hypocovarianism. They can by used for promoting conhibiting prolactin secretion can be used for treating or preventing conhibiting prolactin secretion can be used for treating or preventing conhibiting prolactin secretion can be used for treating or preventing conflictions, infertility, impotence, amenorrhea, galactorrhea, coromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome, prolactions, infertility syndrome, Argonz-del Castilo syndrome, coromegaly, Chiari-Frommel syndrome, and coromegaly, Chiari-Frommel syndrome, coromegaly, coromegaly, Chiari-Frommel syndrome, coromegaly, c

                                                                                                                                                                                                   The present sequence represents a human type ligand fragment. It

CC is used in the course of the invention. The specification describes

CC an agent for modulating prolactin secretion which comprises a

CC ligand polypeptide or a salt, for a G protein coupled receptor (GPCR)

CC protein. The agents for promoting prolactin secretion can be used for

CC treating or preventing hypocovarianism, genecyst cacogenesis, menopausal

CC syndrome, euthyroid or hypometabolism. They can by used for promoting

CC lightniam in a domestic mammal and as an aphrodisiac. The agents for

CC inhibiting prolactin secretion can be used for treating or preventing

CC prolactinoma, infertility, impotence, amenorrhea, galactorrhea,

CC prolactinoma, infertility, impotence, amenorrhea, galactorrhea,

CC corbes-Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia.

CC The inhibitory agents can also be used as contraceptives. The agents for

CC modulating placental function can be used for treating or preventing

CC choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus,

CC abnormal saccharometabolism. Abnormal linidmetabolism or cyrticia.

                                                          The invention relates to a murine pituitary-derived ligand polypeptide which is a ligand for the G-protein coupled orphan receptor designated GPR10 (human) or UHR-1 (rat). Cells transformed with a vector containing the ligand polypeptide encoding DNA are used to produce a recombinant CC ligand polypeptide. The ligand polypeptide, and its fragments, modulate function of the pituitary, central nervous system, pancreas and other tissues and can be used to screen for agents that modulate binding of the colypeptide to the receptor; to quantify the amount of receptor in a CC sample and to raise antibodies. They may also be used therapeutically, CC e.g. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's CC diseases; centraltie, Alzheimer's, Parkinson's or Huntington's CC diseases; schizophrenia; disorders of growth hormone secretion; cancer; CC perative nutritional status and as vasopressor. Transgenic animals CC carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide-expressing genes, as models of CC disease, for drug screening and as source of cell lines. The ligand CC polypeptide DNA is used as a source of probes and primers; to identify related sequences; in receptor-binding assays; for production of Ab and cantisers; in drug development; for gene therapy and to develop transgenic canimals. The present sequence represents a bovine genome-derived ligand polypeptide fragment which is similar to the murine ligand-polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New polypeptide ligand for orphan G protein coupled receptors for treating disorders of central nervous system, pituitary an pancreas, and for drug screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pituitary-derived ligand polypeptide; G-protein coupled orphan receptor; GPR10; UHR-1; modulator; pituitary; central nervous system; pancreas; tissue; screen; therapeutic; binding; senile dementia; ligand; murine; Alzheimer's disease; Parkinson's disease; Huntington's disease; drug;

                                                                        The invention relates to a murine pituitary-derived ligand polypeptide which is a ligand for the G-protein coupled orphan receptor designated GC GPR10 (human) or UHR-1 (rat). Cells transformed with a vector containing the ligand polypeptide encoding DNN are used to produce a recombinant CC ligand polypeptide. The ligand polypeptide, and its fragments, modulate CC function of the pituitary, central nervous system, pancreas and other CC tissues and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a CC sample and to raise antibodies. They may also be used therapeutically, CC e.g. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's CC disease; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC disease; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC disease; critically, epilepsy and many others, also to improve post-corrying the ligand polypeptide encoding DNA or its mutein are used to carrying the function of the polypeptide-expressing genes, as models of CC disease, for drug screening and as source of cell lines. The ligand CC polypeptide DNA is used as a source of probes and primers; to identify related sequences; in receptor-binding assays; for production of Ab and CC transgenic animals. Sequences AAW95174 to AAW95178 represent antigenic epiotpes which can be used for the preparation of anti-ligand polypeptide-cartical.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                            This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig.
